

We will embark on a two-day journey of exploration to ensure you hit the ground running with your DevOps transformation.

## SVA WORKSHOP

# READY FOR THE TRANSFORMATION

## ↳ ENTERING A NEW ERA

### Are you ready to start your DevOps transformation journey?

To fully understand the stages of your journey, it is important to take into account the three key areas of the DevOps philosophy: agile project management, CI/CD toolchain, and agile infrastructure. These key areas allow deep integration of DevOps culture and have proven to lead to success.

The ultimate goal of implementing DevOps is to create a reproducible system that makes use of automation and ensures continuous improvement. This approach makes it possible to provide high-quality products quickly and easily and to meet the long-term requirements of the IT market.

### But what does the first step in this transformation journey look like?

Our proven DevOps Discovery Workshop is the ideal starting point for your transformation journey. We start by analyzing the current state of your IT infrastructure and the requirements, focusing on development and operation. Together, we create an overview of areas to be created or adapted in your DevOps ecosystem and use it to derive a plan that defines the type and scope of the upcoming transformation. This also includes specific recommendations for filling roles and selecting work methods. All of these elements support you in making your vision a reality.

## DETAILS

### Service type

Workshop

### Duration

2 days

### Required prior knowledge

None

### Location

On site or remotely

### Target audience

IT professionals from Dev and Ops

## WORKSHOP SCHEDULE

---

### DAY 1: THE STATUS QUO

- Evaluating focus topics
- Identifying needs and challenges
- Defining use cases
- Analyzing the setup, structure and operation of the IT landscape
- Developing a target vision

### DAY 2: INDIVIDUAL FOCUS AREAS

- Comparing DevOps focus areas with customer requirements
- Analyzing and evaluating needs, opportunities and risks
- Defining the next steps of implementation
- Documenting potential further work packages
- Drawing up a preliminary schedule

## ADDED VALUE OF THE WORKSHOP

---

- Thorough analysis of existing IT components, resources and tools
- Identification of focus areas and presentation of potential measures
- Recommendations for action as a basis for external service requests
- Definition of work packages to be implemented with internal resources or external support
- Rough cost and time estimate
- Security and starting point for a transformation roadmap

## OUR PROMISE:

Our system engineers with in-depth DevOps expertise are ready to support you in shaping your individual DevOps transformation journey. Working closely together with you, we take all of your needs into account to build a solid foundation and develop a robust roadmap. This includes establishing clear principles, ensuring collective planning and using digital tools for effective collaboration.

## Want to know more?

We look forward to hearing from you!

## ABOUT US

SVA System Vertrieb Alexander GmbH is one of Germany's leading system integrators, combining high-quality IT products with project expertise and flexibility to achieve optimum solutions. Focus areas that are relevant across all industries include data centers, business continuity, digital process solutions and SAP, supplemented by expertise in modern requirements such as cloud, cybersecurity, big data and AI, modern workplaces, and agile IT and software development.
